

Deliverable No. 4.1

Project acronym: FarFish

Project title:

Responsive Results-Based Management and capacity building for EU Sustainable Fisheries Partnership Agreement- and international waters

Grant agreement No: **727891**Project co-funded by the European Commission within the Horizon2020 Research and innovation programme

Start date of project: **1**st**June 2017**Duration: **48 months**

Due date of deliverable:	28/02/2018
Submission date:	28/02/2018
File Name:	FarFish D4.1 MP0 for each case study
Revision number:	01
Document status:	Final ¹
Dissemination Level:	PU ²

Deliverable D4.1

MP0 for each case study 28/02/2018

Executive Summary

This report is the detailed description of the current state of affairs in each FarFish case study (CS). It also addresses potential improvements by suggesting case study specific objectives. The MPO will be a significant chapter in the management plan invitation to be sent to the operators, after the dialogue process including authorities and operators. MPO describes the current status in the fishery in question and is the background for the development of the MP1 (the tailor-made good practice recommendation).

MPOs focus on the current state of affairs, the main problems faced and form the basis for the suggested case study (CS) objectives. In advance of the project meeting in November 2017, a common template was designed to collect and compile data from the different CSs. Most of the CS leaders were present at the meeting and provided useful information. After some minor revisions of the template, the MPOs were prepared in collaboration with the CS leaders and FarFish partners. The MPOs include suggestions for Responsive Fisheries Management System (RFMS) agencies (authorities, operators) and comprehensive contact information for relevant stakeholders. Further, the MPO compile the available information on the current state of the fisheries, geographical and biological boundaries, management, assessment, preliminary value chain information, the identified challenges, the suggested CS objectives and potential improvements made by FarFish. The potential for improvement using new or existing approaches/tools are suggested for all CSs, although preliminary as a thorough examination of data availability and quality is required.

In two CSs with sustainable fisheries partnership agreements (SFPA), where several species are targeted by different fleets, the development of a CS specific MPO covering all the target species was considered unattainable. Consequently the CS leaders asked to prioritize which fishery to address in the MPO based on their challenges. Hence, the MPOs focus on the following fisheries in the CS; mixed fishery in the South East Atlantic (FAO 47), mixed fishery in the South West Atlantic (FAO 41), the tuna fishery in Cape Verde (SFPA), the black hake fishery in Senegal (SFPA), the shrimp fishery in Mauritania (SFPA) and the tuna fishery in Seychelles (SFPA). The identified challenges in these fisheries and the suggested CS objectives are relevant for the upcoming identification of indicators and outcome targets (OT), which is the next step in the RFMS process.

Abbreviations & concepts/definitions

ACOPESCA	Competent Authority for Fishery Products, Cabo Verde
ADAPI	Association of Portuguese Industrial Fishing-boat Owners, Portugal
AIS	Automatic Identification System
AMP	Maritime and Port Agency, Cape Verde
ANAMAR	National Association of Ship Owners of Fresh Fruit Freezer Vessels
ANFACO-	National Association of Fish and Seafood Canning Manufactures
CECOPESCA	(Representing EU fishing and processing sector)
APESC	Cape Verde Fisheries Association
ARVI	Cooperativa de Armadores de Pesca del Puerto de Vigo
AZTI	Fundación AZTI – AZTI Fundazioa
BCC	The Benguela Current Commission is a multi-sectoral inter-governmental, initiative of Angola, Namibia and South Africa
BSP	Bayesian Surplus Production model
CAFS	Chinese Academy of Fishery Sciences, governmental scientific institution of Chinese Minstry of Agriculture (MoA). The institution plays an influential role in Chinese national fisheries science and management policy.
CECAF	Committee for the Eastern Central Atlantic Fisheries
CECAF-SC	Committee for the Eastern Central Atlantic Fisheries Scientific Committee
CMM	Conservation and management measures
CMR	Corten Marine Research
COMAHFAT	Ministerial Conference on Fisheries Cooperation
COSMAR	Operations Centre for Maritime Safety, Cape Verde
CPUE	Catch per Unit Effort
CS	Case Study
CSRP	Sub-Regional Fisheries Commission
СТМҒМ	Joint Argentinean-Uruguay Technical Commission of the Maritime Front (managing hake stock since 1975)
DARE	Directory of Fisheries Management in Mauritania
DFADs	Drifting Fish aggregating devices
DG MARE	Directorate-General Maritime Affairs and Fisheries, EC
DG MARE	This Commission department is responsible for EU policy on maritime affairs and fisheries
DGRM	General Directorate for Marine Resources, National Fisheries Authority,Cape Verde
DNEM	Directorate National of Maritime Economy, Cape Verde
DPI	The management of industrial fishing, is responsible for granting licenses and monitoring of access rights payments, Mauritania
DPM	Maritime Fisheries Directorate
ECOWAS	Economic Community of West African States

EEZ	Exclusive Economic Zone
EJF	Environmental Justice Foundation
EMS	Electronic monitoring system
ERS	Electronic Recording Systems
FAD	Fish aggregating device
FAO	The Food and Agriculture Organization of the United Nations
FarFish RG	FarFish Reference Group
FICZ	Falkland Islands Interim Conservation and Management Zone
FIG	Falkland Islands Government
FIP	Fisheries Improvement Project
FOCZ	Falkland Islands Outer Conservation Zone
FPAOI	
	The Federation of Artisanal Fishers of the Indian Ocean, Seychelles
GCM	Coast Guard
HCR	Harvesting Control Rule
HSBG	High Seas Bottom Gear
ICCAT	International Commission for the Conservation of Atlantic Tunas
ICES	International Exploration of the Sea
IEO	Instituto Español De Oceanografia
IFREMER	French Research Institute for Exploitation of the Sea
IMR	Institute of Marine Research
IMROP	Mauritanian Institute for Oceanographic Research and Fisheries (responsible for the approval of licenses and fishing vessels)
INDP	National institute for Fisheries Development, Cape Verde
INDS	National fisheries Institute, Cape Verde
INE	Instituto Nacional de Estatística,Cape Verde
INIDEP	The National Institute of Fisheries Research and Development in Argentina
INPESCA	Cía Internacional de Pesca y Derivados, S.A., Seychelles
IOT	Indian Ocean Tuna, a branch of Union Thai
IOTC	The Indian Ocean Tuna Commission
IOTC WGFADS	IOTC Working group on Fish aggregating devices
IRD	Institute for Research and Development
ISRA	Institut Sénégalais de Recherches Agricoles
ISSF	International seafood sustainability foundation
IUU	Illegal, unreported and unregulated fishing
LDAC	Long Distance Advisory council, EU fisheries body representing stakeholders of both fishing sector and other groups of interest
LJFL	Lower-jaw fork length by age three, swordfish assessment
LJFL	Lower-jaw fork length by age three, swordfish assessment
LPS	The Sectoral Policy Letter, reference framework of the MPEM
MCS	Monitoring, Control and Surveillance
MFMP	National Fisheries Managment Plan

MFMR	Ministry of Fisheries and Marine Resources, Namibia
MPEM	Department of Fisheries and Maritime Economy, Mauritania
MPEM	Ministry of Fisheries and Maritime Economy, Senegal
MSY	Maximum sustainable Yield
OCEANA	International organization focused solely on ocean conservation, NGO
OFCF	Overseas Fishery Cooperation Foundation, Japanese NGO
ONISPA	Office National d'Inspection des produits de la peche et aquaculture
OPAGAC	Organisation of associated producers of large tuna freezer vessels, representing the purse seine fleet
OPRPOMAR	Organization of Fresh Fish Producers of the Port and Ría de Marín, Spain
OPRPOMAR	Organization of Fresh Fish Producers of the Port and Ría de Marín, Spain
ORTHONGEL	French organisation of producers of frozen and deep-frozen tropical tuna
ОТ	Outcome Target
RBM	Results Based Management
RFMO	Regional Fisheries Management Organization
RFMS	Responsive Fisheries Management System
RSFP	Regional Fisheries Surveillance Project
SAMPER	France-based company primarily engaged in the catching and processing of several species of fish and specifically Tuna
SC SEAFO	Scientific Committee SEAFO
SEAFO	South East Atlantic Fisheries Organisation
SFA	Seychelles fishing Authority
SFPA	EU Sustainable Fisheries Partnership Agreements
SIGQ	Serviços de Inspeção e Garantía de Qualidade cpcp, Cape Verde
SIOTI	The Sustainable Indian Ocean Tuna Initiative
SMARTFISH	Regional fisheries programme managed by the Indian Ocean Commission, funded by the European Union and co-implemented by the Food and Agriculture Organization of the United Nations. IOC SmartFish
SMSP	Seychelles Marine Spatial Planning
TAC	Total Allowable Catch
TL	Total lenght
UNK area	Unknown area
VME	Vulnerable Marine Ecosystem
VMS	Vessel Monitoring System
WWF	Worldwide fund for nature
RFMS	RFMS is a fisheries management approach developed within the EcoFishMan project. The RFMS is an adaptive management system that is results-based and ecosystem-based. The RFMS attempts to reduce micromanagement by involving stakeholders and increase the degree of co-management.
ОТ	Outcome target (OT) is a specific and measureable performance goals defined for a fishery on the basis of agreed and appropriately authorized general goals, standards and principles, as defined by the authorities based

	on the policy objectives. The OT is the indicator value that the		
	managementactions aim to stay above or below e.g. F< Fmsy		
	Organizational entity enacting authority in pursuit of the management		
Authority	objectives decided for a fishery e.g. a coastal state or the European		
	Commission.		
	Organizational unit with delegated authority to develop management plans		
Operator	and oversee or conduct fishing operations within the standards decided by		
	a management authority		

1 Introduction

The MP0 is the first stage in the development of the responsive management plan and provides case study specifications relevant for the development of Management Plans (MP). The development of MP is based on the Responsible Fisheries Management System (RFMS) approach [1] which was developed in the EcoFishMan project, incorporates Ecosystem Approach (EA) to Fisheries [2] and is founded on Results Based Management (RBM) of fisheries [3]. MP0 describes the current status in the fishery in question and is the background for the development of the MP1 and has been developed in the pre dialoge prosess. The objectives suggested for the MP1 are open for discussion in the first step of the MP1 development in 2018. In FarFish, a bottom up approach is applied in the development of the RFMS [2], where stakeholders (authorities, operators, scientists, etc.) were approached at the proposal stage which entailed the participation of several stakeholders as partners or Reference group members in the project. The MP0 will serve as background material when defining the outcome targets (OT) (Figure 1.1), which is the next step in the RFMS process, and is therefore an attachment to the MP1 invitation [2].

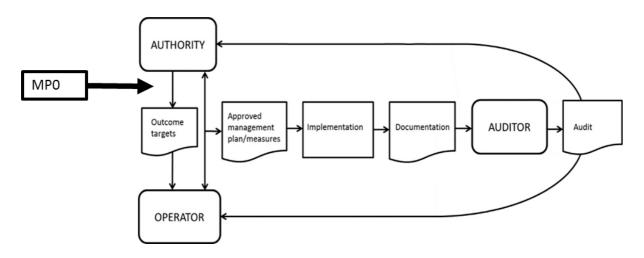

Figure 1.1 Conceptual model of a results based management in fisheries (Modified from Nilsen et al., 2015)

A common template (Table 1.1) was developed to gather the information from each CS. The template contains information on which area, stocks, fleet and RMFS agencies it applies to, fishery idenfication, management and preliminary information on the value chain. With emphasis on the current state of affairs and the main problems faced, the proposed specific case study objectives were identified. In cases where data and information were available, some potential for improvements using new or exsisteing approaches/tools were suggested. Available CS contact information on RFMS agencies and stakeholders is also provided as these actors are cruisal in the to the MP1 developement.

The FarFish MPOs compile input from FarFish D2.1, meeting with CS leaders and investigating teams in Faro, Portugal (nov. 2017) and other relevant documents/publications/reports relevant for each CS. Table 1.1. provides the universal structure of the MPO and the following tanles contain the CS specific MPO information. Extensive literature lists are provided on the latest literature and the most relevant figures are made available.

Governance	No RFMO apply to the mixed fisheries in FAO 41. Many countries	
	have signed UNCLOS and the the UNGA Resolutions; 59/25 in	Portela et al.,
	2004, UNGA Resolution 61/105 in 2006, Resolution 64/72 in 2009.	(2012)
RFMO	ICCAT, CCSBT	FarFish D2.1
MP (name,	None, but there might be relevant MPs for the straddling stocks	
objective,	(Merluccius hubbsi, Merluccius australis, Illex argentines and	
area)	Micromesistius australis) from Patagonian shelf that FarFish can	
	relate to.	
CS objectives	To initiate dialogue between stakeholders involved in fishery	FarFish D2.1
	in FAO area 41.	
	2) Improve the quality and quantity of data collection	
	3) Compile knowledge of the straddling stocks from the different	
	scientific institutions. 4) Contribute to better monitoring in the area by supporting	
	enforcement by utilizing latest available satellite systems and	
	tools.	
Harvesting	11 areas closed for bottom trawling by EU fleet, according to UN	Portela et al.,
control rules	Resolution 65/105 2006.	(2012)
	Spain closed 9 areas for BT in 2011 due to identified VMEs. Two	
	additional areas are closed for EU fleet due to existing ting trawling	

	footprint. EU fleet restrictions apply for EU fleet, but not adopted by other foreign fleet or Argentina. There are some bycatch regulations from Brazillian government that apply both within EEZ and in international waters for the	USP, JG Brazil (2011)
Data collection (fishery, catch and bycatch, employment)	Brazilian fleet. Very scarce data collection in absence of RFMO or other authority. Main EU fishery nations are Spain, Portugal and France. EU fleet make reliable catch data, but this is not sufficient to do scientific advice or reliable stock assessment. Hake, squid and southern blue cod are shared stocks with Argentina, Falkland island and high seas. INIDEP (Argentina) collect data within EEZ and a joint commission of of Argentina/Uruguay (CTMFM). Falkland Island collect data within their EEZ by FIG from FICZ and FOCZ. Both FIG and INIDEP conduct research surveys. China, Taiwan and Korea are fishing in the area, but catch statistics from them are lacking. As CAFS is a FarFish RG, we are expecting	FarFish D2.1 FIG (2017), FarFish DoA
Assessment	All species of commercial interest for EU fleet are straddling stocks, shared between Argentina, Falkland Islands and high seas. Southern blue whiting stock migrates between Argentine, Chilean and Falkland waters. The increasing stock of southern blue whiting in Falkland waters is possibly due to changes in migration pattern.	FIG (2017) Chang et al., (2016)
MCS	EU vessels fishing in subarea 41.3.1 and 41.3.2 need a special fishing permit (time limited, species, zone, fishing gear and depth) EU vessels not allowed to fish in unassessed areas Spain has adopted to a comprehensive set of measures and standards with are binding on the shipping company (vessel owner), including mandatory presence on board of an observer.	Portela et al., (2012) FarFish DoA
Preliminary Valu	ie chain	
•	hensive value chain analysis is to be elaborated within the lifetime oject (FarFish D3.4, December 2018)	NOFIMA
Port	Deep sea fish species caught in HSBG are mainly landed in Spain (Vigo), but also in Uruguay (Montevideo) for transhipment. Most Spanish vessels land in Galician ports, either by freezing catches at sea of transhipping	MRAG, MG Otero and PoIEM (2008), FarFish D2.1

Processing	Spain dominates catches by European vessels in this area (97% in	Farfish D2.1
	2015), with small quantities caught by UK and Portuguese vessels.	www.fao.org/f
	All in all European vessels are responsible for 9.4 % of total catch	ishery/statistic
	in these waters (2015) – with both shares and volume reduced	<u>s/</u>
	from 2014. Argentine hake being the most important species.	
	Catches enter the Spanish value chain by landings or transhipment	
Market	Global value chain – to be elaborated.	NOFIMA
Challenges		
Data poor	Uncomplete catch statistics on target and bycatch species	FarFish DoA
situation	(including bycatch species of non-commercial interest)	
Management,	Regulatory measures are not universally applied. Fishers from	Muños et al
lack of RFMO	countries who enforce the measures find the measures ineffective	(2012)
	and discriminatory since the area contrary to their own economic	
	interests	
MCS	Restrictions due to existing trawling footprint or identified VMEs	FarFish DoA
	area not accepted by non-EU fishing fleets, mainly Asian countries	
	(China, Taiwan and South Korea)	
MCS	If fishery activities expand into deeper water, there is an increased	FarFish DoA
	risk of interaction with VMEs	
MCS	There is a need for increased compliance, monitoring and control	
	in this area	
Potential	Using new tools	
improvements		
Data collection	Due to the limitations of information on catch statistics from non-	
	EU nations, this issue is still under consideration.	
Management	Internal communication with FarFish partners will ensure that the	
	FarFish contribution (models and or tools) will be relevant and add	
	value management of the high seas fisheries in the area.	
Monitoring	Contribute to better monitoring in the area by supporting	CSIC
	enforcement by utilizing latest available satellite systems and tools

4 Case study area Cape Verde

4.1 MP0 Cape Verde

Current state			
This MPO apply (area, stocks, fleet, authority and operators) to EU fishery of tuna (yellowfin, bigeye,			
skipjack) in Cape Verde EEZ according to the fisheries agreement (SFPA), but EU also target blue shark			
and swordfish. R	elevant fleets are purses seiners, longliners, pole and line and the	vessels are from	
Spain, Portugal a	nd France. Relevant authorities are DG MARE and DNEM while ope	rators are LDAC,	
OPROMAR, OPAG	GAC, and ANFACO-CECOPESCA.

Fishery identifica	ition		
Species (target,	Target: Yellowfin tuna (Thunnus albacares), Bigeye tuna (Thunnus	FarFish D2.1,	
bycatch)	obesus), Skipjack tuna (<i>Katsuwonus pelamis</i>), Bycatch; sea birds,	SFPA,	
	turtles, swordfish (Xiphias gladius), blue shark (Prionace glauca)	appendix 2	
Geographical	Pole and line; beyond 12 nautical miles from the base line	SFPA,	
	Tuna seiners; beyond 16 nautical miles from the base line, taking	appendix 2.	
	into account the archipelagic nature of the Cape Verdean fishing		
	zone. Surface longliners; beyond 18 nautical miles from the base		
	line. Species distribution is described by ICCAT	ICCAT (2016)	
	Yellowfin: cosmpolitiean species distributed in the tropical and		
	subtropical oceanic waters of the three oceans.		
	Bigeye : distributed throughout the Atlantic ocean between 50°N		
	and 45°S, but not in the Mediterranean Sea. Swims deeper than		
	the other tropical tuna species and exhibits extensive vertical		
	movements.		
	Skipjack: Schooling in the tropical and subtropical waters of the		
	three oceans. Predominant species aggregated to FADs.		
	Swordfish: widely distributed in the Atlantic Ocean and		
	Mediterranean Sea.		
	Blue shark: highly migratory from tropical to temperate waters		
	worldwide. Potentially two stocks in South Atlantic, one in the	Domingo et al.,	
	equatorial area and another in the southwestern area between	(2008)	
	19° and 41°S latitude.

SFPA	2014-2018, 5000 t/year	SFPA
Governance	The management of the fishery sector is assured by the National Directorate of Maritime Economy, an institution of the Ministry of	INDP
	Transport, Tourism and Maritime Economy. The Secretary of	
	Marine Economy is a new institution recently created by the	
	government and it belongs to the Ministry of transport, tourism	
	and Martitime Economy (situated in Sao Vicente Island). SIGQ is	
	dependent on DNEM and has replaced ACOPESCA	
RFMO	ICCAT	FarFish D2.1
MP (name,	Cape Verde Fisheries Management Plan (PGRP). Objective; ensure	FarFish D2.1
objective, area)	that the fisheries of Cape Verde contribute to increase national	
	production, food safety, quality of fishery products, employment,	
	and to decrease balance of payment deficit. The PGRP proposes a	
	set of measures for the rational exploitation of fisheries resources	
	and the development of the fisheries sector in a sustainable way.	
	This plan also contemplates shark fishing, fished by foreign	
	vessels. However in relation to tuna fishery done by foreign fleet	
	the management measures applicable are the ones set by ICCAT	
CS objectives	 In conformity with ICCAT, collect and analyse data on bycatch of swordfish and blue shark by the EU fleet in the Cape Verde EEZ if the data, if the data is available. If sufficient data is accessible, model scenarios, which may add value to development harvest control rules for these bycatch species. Contribute to better monitoring in the area by supporting 	INDP, FarFish D2.1, CSIC
	enforcement by utilizing latest available satellite systems and tools	
Harvesting	Skipjack tuna (ICCAT); MSY (143 000 - 170 000), current yield	ICCAT (2014)
Control Rules	(2013): 203 500 t, Relative biomass (B2013/Bmsy):Probably >1,	ICCAT (2016)
	Fishing mortality (F2013/Fmsy): probably <1, seasonal	
	moratorium FADs Jan.2013 (From African coast to 10°S and 5°W	
	latitude to 5°E longitude during January-February)	
	Yellowfin tuna (ICCAT); MSY (~144 600 t) (based on non-	
	equilibrium production model (ASPIC) and age structured model	
	(VPA), Relative biomass (B2013/Bmsy): 0.95 (0.71-1.36), Relative	
	Fishing mortality (F2014Fmsy): 0.77 (0.53-1.05). Time area closure	ICCAT (2015c)
	for FAD associated surface fishing, TAC 110 000 t, authorization	
	for vessels (>20 m), specific limits of number of longline and/or	
	purse seine boats for a number of fleets	

	Bigeye tuna MSY 78 824 t (67 725-85 009 t), Yield (2014): 72 575	ICCAT (2015a)
	t, Relative biomass (B2014/Bmsy): 0.67 (0.48-1.20), Relative	
	Fishing mortality (F2014)/Fmsy: 1.38 (0.61-1.85), TAC (2012-	
	2015): 85 000 t, restriction of longline boats, purse seine boats, no	
	fishing with natural or artificial floating objects in January and	
	February as for skipjack.	
	Blue shark High uncertainty in Bmsy, Fmsy high uncertainty.	
	F2013/Fmsy: 0.01-1.19, B2013/Bmsy: 0.78-2.03. Incomplete catch	
	reports.	
	Swordfish Catch limits, min size limits (125/119 cm LJFL), TAC no	
	more than 15 000 t due to poor data. Catches below TAC since	
	2002 (by 2014)	
Data collection	INDP, data collection, compilation of fisheries statistics, research	FarFish D2.1
(fishery (catch	and assessment	INDP
and bycatch),	DNEM, all EU vessels report catch statistic to Ministry responsible	
employment,	for fisheries in Cape Verde and electronically or by fax to the flag	
	Member State.	
	INDS National Fisheries Institute, collect data for commercial tuna	
	fishery (catch, effort, supplemented with data from other	
	sources)	
	INE compiles socio-economic data on the fisheries.	
Assessment	ICCAT stock assessment , INDP	
	Skipjack: Reference year 2013. Assessment based on catch only,	ICCAT (2014)
	and catch and effort data, Bayesian Surplus Production model	
	(BSP). Problem with bycatch of juvenile bigeye and yellowfin tuna	
	juveniles in FAD fishing for skipjack	ICCAT (2016)
	Yellowfin: Reference year 2014. Considered as one stock whole	
	Atlantic. Assessment based on age structured and a non-	
	equilibrium production model. Most recent analysis in 2010	
	indicate overfishing, but annual catches 2012-2014 were below	ICCAT (2015c)
	MSY. Concern FAD-related mortality of small yellowfin	
	Bigeye : Reference year 2014. Considered as one stock. An	
	Assessment in 2015 using a variety of models, including non-	
	equlibrium production models, age structured models (VPA) and	
	integrated statistical assessment models. Bigeye is considered	ICCAT (2015d)
	overfished and there is a concern FAD-related mortality of small	
	yellowfin	
	Blue shark: Production models fitted to CPUE data, length based	
	age structured models, hierarchial cluster analysis. For the South	ICCAT (2017)
	<u> </u>	` '

	Atlantic stock, estimates that stock is not overfished in BSP model,	
	but state spaced BSP predicts that stock could be overfished and	
	that overfishing could be occurring.	
	Swordfish: South Atlantic. TAC 15 000 t, Current yield (2014):	
	9 885 t, Bmsy 11 055 t, F: unknown, Relative Biomass	
	(B2011/BMSY): unknown, but likely above 1, Relative Fishing	
	Mortality (F2011/FMSY): unknown, but likely below 1. Not	
	overfished, country specific TACs.	
MCS	As established in the SFPA Agreement, all vessels authorized to	FarFish D2.1,
	fish in Cape Verde waters shall be obliged to communicate their	SFPA
	catches to the Ministry responsible for fisheries in Cape Verde	
	Vessels are obliged to report catch to Ministry responsible for	
	fisheries in Cape Verde within 30 days.	
	Autoridade Competente para os Productos da Pesca (ACOPESCA)	
	are responsible for control, inspection and certification of fish	
	products from 2014. Is recently replaced by Serviços de Inspeção	
	e Garantía de Qualidade (SIGQ).	
	Maritime and Port Agency (AMP)	
	Operations Centre for Maritime Safety (COSMAR) is under the	
	command of the Coast Guard	
	All data shall be reported to Directorate National of Maritime	
	Economy (DNEM) and to INDP	
	Inspections (sea, port), Observers	
	VMS (80% of industrial fleet has installed VMS), AIS, ERS (from	Pramod (2017)
ιυυ	Sept.1 2015), but VMS is weakened by poor internet connectivity	
	and electrical grid interruptions.	
	All EU vessels shall keep fishing logbook , Catch reports	Pramod (2017)
	Cape Verde has adequate surveillance infrastructure (patrol	
	aircraft, sea based patrol vessels and coastal patrols) to effectively	
	control resources within its EEZ. Has adequate trained officers to	
	conduct MCS operations.	
Preliminary value chain		
A more compreh	nensive value chain analysis is to be elaborated within the lifetime	NOFIMA
of the FarFish project (FarFish D3.4, December 2018).		
Port	Cape Verde catches are landed in West Africa, long liners use Cape	Faro Meeting
	Verde as base. Cape Verde is usually used mainly through trans-	minutes
	shipment.	
	Vessel owners pay 55-65 Eur/tonne as vell as advances per vessel.	FarFish, WP3
	Evaluation in 2013 suggested very little induced effects for Cape	

	Verde as fish is landed in other ports. Tuna from seiners was	
	landed for further processing in Abidjian and from longliners for	
	transhipment in Cape Verde.	
Processing	National canneries are present in Cape Verde with problem of	Faro Meeting
	supply. Information on national processing are available through	minutes
	project partner. National processing is too expensive due to island	
	costs.	
Market	Fish from seiners are processed in Abijian and enter primarily	FarFish, WP3
	European market as canned products.	FarFish
	Fish from longliners are sent in freezer containers primarily to	evaluation
	Europe for further processing (info from 2013 evaluation)	
Challenges		
Fishery,	In the agreement established between EU and Cape Verde, the	INDP
bycatch	sharks, swordfish and turtles must be considered as by catches.	
	However, it is noted that the quantity of sharks caught is bigger	
	than tuna some years. This issue must be well clarified or	
	discussed in the next agreement to be established.	
Management	Competition with national fleet	FarFish D2.1,
	The implementation of PGRM is in progress as DNME has the	INDP
	updated the plan	
	Fisheries legislation is in an updating process	
MCS	Insufficient control and monitoring	FarFish D2.1,
	Noncompliance of PGRP by foreign vessels.	INDP
Potential	Using new tools	
improvements		
Data collection	The case study is enclosed in ICCAT, which is responsible for stock	FarFish D2.1
	assessment of tuna and tuna like species and has a number of	
	tools. As ICCAT is a part of FarFish RG, internal communication	
	with FarFish partners will ensure that FarFish contributes in a	
	relevant matter eg. Visualisation.	
Management	Application of RBM principles and the RFMS framework to Cape	FarFish D2.1
	Verde tuna fishery.	
Monitoring	Contribute to better monitoring in the area by supporting the	CSIC
	enforcement by utilizing latest available satellite systems and	
Canacity	tools Development and implementation of higherical campling and data	FarFish D2 1
Capacity	Development and implementation of biological sampling and data	FarFish D2.1
building	collection programmes

5 Case study area Senegal

The development of a case study specific MPO covering all the target species in Senegal CS was considered unattainable. Therefore, the case study leader was asked to prioritize which fishery the MPO should address based on their challenges. Consequently, the black hake fishery was selected because of the mixing of two species in the catches. Also, these black hake species are evaluated as a single stock, due to the limited knowledge about the two. Following, in order to obtain a sustainable management of the two species, species specific assessment models are desirable.

5.1 MP0 Senegal

Current state		Reference
This MPO apply to (area, stocks, fleet, authority and operators) to EU fishery for Black Hake in		
Senegalese EEZ (shared with Guinea in the southern part). Demersal trawlers for EU (Spain). Relevant

6 Case study area Mauritania

The development of a case study specific MPO covering all the target species in Mauritan CS was considered unattainable. Therefore, the case study leader was asked to prioritize which fishery the MPO should address based on their challenges. Consequently, the shrimp fishery was selected because of bycatch issues.

6.1 MP0 Mauritania

Current state		
This MP0 apply (a	rea, stocks, fleet, authority, and operators) to EU shrimp fishery ir	Mauritanian EEZ.
Relevant fleet are	e demersal trawlers. Relevant authorities are DG MARE, MPEM a	ınd ONISPA, while
relevant operator	is LDAC. EU vessels (demersal) are from Spain.	
Case study	IMROP	
leader	Contact person: Khallahi Brahim, medfall_khall@yahoo.fr	
Fishery identificat	ion	
Species (target,	Taget: two species of shrimp, Langostino/Prawn	FarFish D2.1,
bycatch)	(Farfantepenaeus notialis) and Gamba/Southern pink shrimp	Faro meeting
	(Parapenaeus longirostris).	
	Other species; Melicertus kerathurus, Aristeus varidens,	
	Plesionika heterocarpus, Aristaeopsis edwardsiana	
	Bycatch; 8% cephalopods, 10 % crabs, 15 % fish	
Geographical	The southern pink shrimp/Gamba is distributed from Cape	FAO/CECAF
	Spartel (35°47′N) to Sidi Ifni (29°22′N) in coasal areas at depths	(2013)
	between 20 and 700 m. In the waters of Mauritania, the fishery	
	of southern pink shrimp/gamba is carried out in deep waters	Bouzouma et al.,
	(100 – 350 m) mainly between 21° and 19°N (Mainly between	(2017)
	20°30N and the Senegal border).	
	Langostino has a reproduction and nursery area in the Banc	FAO/CECAF
	d'Arguin and another identified area in the mouth of the	(2013)
	Senegal river. The fishery of langostino is carried out in two	
	main coastal areas; around Cap Trimiris between 20°N and	
	18°30N and south of Nouakchott, between 17°30N and 17°N	
	(mainly south of 17°50'N) at depths between 25 and 70 m.	
	In 2016 and in first half of 2017, Spanish vessels mainly fished	
	between 20°N and south of Nouackchott to the border with	Bouzouma et al.,
	Senegal. North of 20°N, the fishery was conducted in deeper	(2017)
File State and the	waters.	CEDA /2015

Preliminary value	chain	
A more comprehe	ensive value chain analysis is to be elaborated within the lifetime	NOFIMA
of the FarFish pro	oject (FarFish D3.4, December 2018)	
Port	The shrimp catches are not landed in Mauritania. It would be	Faro meeting
	reasonable to assume they are landed in Spain and enters the	
	processing there	
Processing	Shrimp probably primarily landed in Spain, we have no info on	NOFIMA (WP3)
_	the further processing of this, will have to be investigated	
Market		
Challenges		
Fishery	High bycatch in shrimp fishery	Faro meeting,
		IMROP
MCS	Problems with access for IMROP inspectors/observers on board	Faro meeting,
	EU vessels	IMROP
Other concerns	Environmental forcing. The fluctuations in landings are	CSIC
	associated with climatic/oceanographic fluctuations and affects	
	the profitability of the fleet.	
Potential	Using new tools	
improvements		
Assessment,	Advanced knowledge on how the signal of oceanographic	CSIC
Early warning of	processes affects the shrimps stocks and the shrimp fishery will	
risks	improve assessment and dampen the fluctuations in landings.	
	Given the present capacity of the scientific community to	
	foresee the impact of large-scale climatic oscillations, this might	
	help to rise early warnings and preventive measures to protect	
	, , , , , , , , , , , , , , , , , , , ,	

the stock and improve long-term profitability of the EU fleet	
targeting shrimp.

(fishery; catch	composition, observer programme (IRD, IEO)	
and bycatch,	Fishery independent surveys by SFA for demersal species	
employment)		
Assessment	Indian Ocean Tuna Commission (IOTC)	
	Yellowfin; Fox-form Bayesian biomass dynamics model, and	IOTC (2015)
	integrated age-structured models. Yellowfin is overfished in the west	
	Indian Ocean. IOTC has set limits to yellowfin tuna catches, which will	
	make Seychelles quotas drop by 15 %	IMF (2017)
	Skipjack ; difficult to assess due to rapid population dynamics, maybe	
	continuous spawning, selectivity usually uninformative about year	
	class strength and relative abundance indices derived from pole and	FarFish D2.1
	line and purse seine fisheries are generally considered to be less	
	reliable than those of longline fisheries. Recent models seem to have	
	used stock synthesis. Skipjack is in relatively good state.	
	Bigeye ; Assessed using Stock Synthesis and ASPM software, bigeye is	
	in relatively good state	IOTC (2015)
	Catch rates of other species are declining, reflecting over-fishing	
	pressure in open-access fisheries	
Monitoring,	Seychelles participate in IOTC regional observer scheme to monitor	SFA, VL
Control and	trans-shipments at sea on carrier vessels for the industrial longline	
Surveillance	fleet. Transhipment only within Seychelles' ports.	
(MCS)	VMS, ERS, observers appointed by Seychelles authorities.	SFPA, sec.4
		SFA, VL

	Fisheries Monitoring Centre (FMC), makes annual vessel compliance,	Fisheries Act
	check logbooks, receives obligatory VMS data and conducts sea	2014.
	patrols, catch certificate scheme (ensuring no IUU fishing activity)	
	Regional Fisheries Surveillance Project (RFSP) and IOC SmartFish (FarFish D2.1
	programme managed by the Indian Ocean Commission, funded by the	IOTC (2015)
	European Union and co-implemented by the Food and Agriculture	SFA, VL
	Organization of the United Nations).	
	Seychelles National Scientific Observer Programme; deployment of	
	observers on-board industrial purse seiners. EMS pilot project to	
	complement human observers.	
Preliminary Valu	ie chain	
A more compre	hensive value chain analysis is to be elaborated within the lifetime of	NOFIMA
the FarFish proje	ect (FarFish D3.4, December 2018).	
Port	Designated port for landing activities is Victoria, Mahé, all EU vessels	EU, SFPA,
	shall endeavour to procure in Seychelles all supplies and services	sec.3, chpt
	required for their operations.	VI,
	EU vessels land the majority of catches in Seychelles (92% of Spanish	FarFish
	catch, 82% of French catch)	DoA,p18
Processing	Indian Ocean Tuna (IOT), a branch of Union Thai /Seychelles	Farfish D2.1
	Government (60/40), has a canning factory employing half the fishery	(p. 44-45).
	sector in the Seychelles (approx. 2,500, 60 % foreign workers). IOT is	NOFIMA
	responsible for 95 % of Seychelles manufacturing export, and 45 % of	
	imports, producing 1.6 million cans daily from 340 tons of tuna	
	(world's second largest tuna canning factory).	
	Most tuna landings are transhipped, fresh or frozen, elsewhere (64 %	
	in 2013) (www.sib.gov.sc/index.php/sectors/fisheries)	
Marked	Canned tuna enters the global market, while the whereabouts of	NOFIMA
	transhipped tuna are unknown, but probably with Europe as primary	
	market.	
Challenges		
Data collection	Landing reports. Many longliners do not land domestically and that	FarFish D2.1
	makes it difficult to obtain good logbook coverage, trans-	
	shipments/landings as well as size frequency data. However,	
	information on landings in foreign ports is received.	
Assessment	Lack of assessment of the sustainability of non-target species	IOCT
	(e.g. dolphinfish, wahoo, barracuda, rainbow runners)	
Management	Effort regulation of DFADs. There is a very large number of DFADs in	Faro
	the Indian Ocean and with FAD free tuna campaign in market	Meeting
	countries; this may affect trade of tuna from the Indian Ocean.	
	•	i.

	Understand the social and economic consequences under scenarios	
	including a reduction in the number of FADs.	
Management	There is a need to improve compliance with Conservation and	SFA, VL
	Management Measures (CMM).	
MCS	a) Regionally coordinated observer programme is required	
	b) Promote regional cooperation to combat IUU	FarFish D2.1
	c) Control at sea largely restricted to national fleet	
	d) Lacking of manpower and equipment for surveillance	
Potential	Using new tools	
improvements		
Assessment	Contribute to the assessment of non-target species included in recent	
	discard ban (IOTC, 17/04)	
Management,	a) Increase compliance by observer training and port state	FarFish D2.1
monitoring	 inspections b) Contribute to better monitoring in the area by supporting enforcement by utilizing latest available satellite systems and tools 	CISC
Management,	The case study is enclosed in IOTC, which is responsible for stock	IOTC (2008,
tools, model	assessment of tuna and tuna like species in the Indian Ocean and has	2015, 2015,
scenarios	a number of tools. IOTC ad hoc working group on FADs is addressing	2017a,
	number of FADs. As IOTC is a part of FarFish RG, the communication	2017b,
	will ensure that FarFish contributes in a relevant matter eg.	2017c)
	Visualisation, model scenarios. The dialogue is in progress.

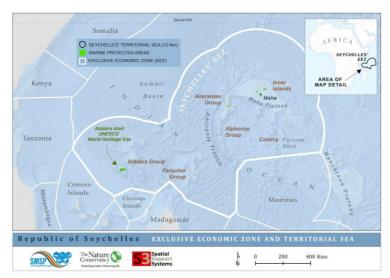

Figure 7.1 Republic of Seychelles Exclusive economic zone and territorial Sea (SMSP, 2015)

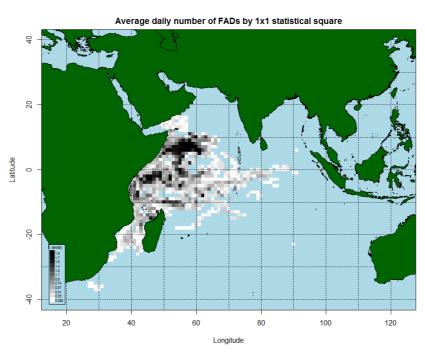

Figure 7.2 Average daily density of FADs used by one vessel of the Spanish and associated fleet in the Indian Ocean in January 2017, by 1x1º statistical square (IOTC 2017)

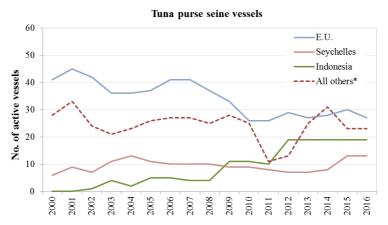

Figure 7.3 Number of active vessels in the Indian Ocean 2000-2016 for tuna purse seine (PS) Note: all other purse seine fleets includes I.R. Iran, Japan, Rep. of Korea, Mautitius, Malaysia and Thailand (with the exception of Australia whose purse seine fleet fishes exclusively for southern Bluefin tuna) (IOTC, 2017 c)

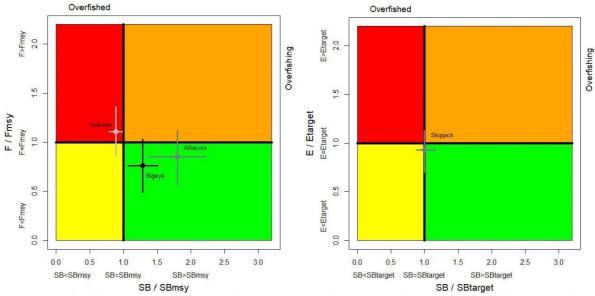

Figure 7.4 (Left) Combined Kobe plot for bigeye tuna (black: 2015), yellowfin tuna (grey: 2015), and albacore tuna (dark grey: 2014) showing the estimates of current spawning stock size (SB) and current fishing mortality (F) in relation to SBtarget and Ftarget. (Right) Kobe plot for Skipjack tuna (2016) showing the estimates of the current spawning stock status (SB) and exploitation rate in relation to SBtarget and Etarget. Numbers in brackets indicate the last year of data available at the time of the assessment. Cross bars illustrate the range of uncertainty from the model runs with 80% CI (IOTC, 2017c)

8 Brief summary of objectives, challenges and potential improvements for all case studies

The current status of fishery, management, challenges, objectives and potential improvements are tailor made for the specific case study areas based on the present available information from case study leaders, FarFish partners, RFMO reports and relevant literature available. The suggested case study specific objectives (Table 8.1), identified challenges (Table 8.2) and potential improvements (Table 8.3) based the currently available information are summarized and complied to ease comparison between the CS.

Table 8.1 FarFish Case study objectives from MP0s

South West Atlantic

- 1) To initiate dialogue between stakeholders involved in fishery in FAO area 41
- 2) Improve the quality and quantity of data collection
- Compile knowledge of the straddling stocks from the different scientific institutions
- 4) Contribute to better monitoring in the area by supporting enforcement by utilizing latest available satellite systems and tools

South East Atlantic

- 1) Improve data quality and quantity
- 2) Work to advance biological knowledge, and improve monitoring in the SEAFO area
- 3) Contribute to better monitoring in the area by supporting enforcement by utilizing latest available satellite systems and tools

Cape Verde

- In conformity with ICCAT, collect and analyse data on bycatch of swordfish and blue shark by the EU fleet in the Cape Verde EEZ if the data, if the data is available. If sufficient data is accessible, model scenarios, which may add value to development harvest control rules for these bycatch species.
- 2) Contribute to better monitoring in the area by supporting enforcement by utilizing latest available satellite systems and tools

Senegal

- 1) Develop sustainable MP of the two hake species. Stock discrimination, specify F, SSB improving HCR and traditional stock assessment for hake. Improve species-specific knowledge, need access to data, maybe from National management institution.
- 2) Contribute to better monitoring in the area by supporting the enforcement by utilizing latest available satellite systems and tools
- 3) Observers on EU vessels, improve bycatch registration, self -sampling protocols, improve monitoring of catch, effort and sizes for hake as target and bycatch species

Mauritania

- 1) Reduce bycatch in shrimp fishery, as several bycatch species are overexploited. Improve technology, increase number of scientific observers on board the shrimp vessels. Scientific observer should collect data and the value in the bycatch. Specification of bycatch species in ships logbook data.
- Advance knowledge on shrimp landing fluctuations in the context of environmental forcing. Assess
 vulnerabilities originated from the combined action of human exploitation and adverse
 oceanographic conditions. Analyse alternatives to minimize risks.

Seychelles

- 1) In conformity with IOTC, which are monitoring the number of FADs in the Indian Ocean. Investigate the economic consequences of different FAD-number scenarios as emerging from the ad hoc IOTC working group.
- 2) Contribute to better monitoring in the area by supporting the enforcement by utilizing latest available satellite systems and tools
- 3. Contribution to the assessment of the sustainability of non-target species included in the recent discard ban (17/04) that are not currently assessed (e.g. dolphinfish, wahoo, barracuda, rainbow runners)
- 4. Analysis of the economic and social impacts of the discard ban (17/04)

Table 8.2 FarFish Case study challenges

Southwest Atlantic		
Data poor	Lack of knowledge on IUU as well as catch statistics on target and bycatch species	
situation	(including bycatch species of non-commercial interest)	
Management,	Regulatory measures are not universally applied. Fishers from countries who	
lack of RFMO	enforce the measures find the measures ineffective and discriminatory since they	
	are contrary to their own economic interests.	
MCS	Restrictions due to existing trawling footprint or identified VMEs area not	
	accepted by non-EU fishing fleets, mainly Asian countries (China, Taiwan and	
	South Korea)	
MCS	If fishery activities expand into deeper water, there is an increased risk of	
	interaction with VMEs	
MCS	There is a need for increased monitoring and control in this area	
Southeast Atlantic		
Data poor	TAC usually not based on sufficient data.	
situation,		
Management	Maintain international framework for future work and protection	
	Although fishing effort in the CS is currently low, FarFish will focus the work to	
	advance biological knowledge, and improve monitoring, compliance and	
	enforcement in the SEAFO area.	
Management,	Strengthening the RFMOs performance in terms of scientific knowledge,	
performance	monitoring and enforcement. The priorities of FarFish will reflect the priorities of	
of SEAFO	SEAFO	
Cape Verde		
Fishery,	In the agreement established between EU and Cape Verde, the sharks, swordfish	
bycatch	and turtles must be considered as by catches. However, it is noted that the	
	quantity of sharks caught is bigger than tuna some years. This issue must be well clarified or discussed in the next agreement to be established	
Management	Competition with national fleet.	
	The implementation og PGRM is in progress as DNME has updated the plan.	

	entraga da sala sala sala sala sala sala sala
	Fisheries legislation is in an updating process
MCS	Insufficient control and monitoring
	Noncompliance of PGRP by foreign vessels
Senegal	
Data	The two species of hake and there is data limitation to discriminate the stocks,
collection	poorly known biology in Senegaleze EEZ. Stocks are not separated in catch
	statistics, of even in scientific fishing statistics (especially in Senegalese data)
Assessment	Need to improve assessment models as the species are currently assessed as one
	single stock. A recent study imply that these black hakes attain the fastest growth
	ever given for any hake species, following age at maturity at the end of first year
	for M.Senegalensis and during the second year for M.polli.
Fishery,	The species have overlapping distribution and are mixed in catches and are
stock	commonly marketed as Merluccius and evaluated as a single stock. Lack of
discrimination	knowledge on the two species of hake, bycatch registrations need to be species
	specific
Management,	SFPA is set to 2000 t, but the MSY is set to 1657.
sustainability	Overexploitation of particularly demersal species, but increasingly also coastal
	pelagic stocks
MCS	There is a need to increase controls of fishing vessels (observers and inspections)
Other	Coastal erosion, climate change, pollution, ecosystems degradation
concerns	
Mauritania	
Fishery	Bycatch in shrimp fishery
MCS	Problems with access for IMROP inspectors/observers on board EU vessels
Other	Environmental forcing. The fluctuations in landings are associated with
concerns	climatic/oceanographic fluctuations and affects the profitability of the fleet
Seychelles	
Data	Landing reports. Many longliners do not land domestically and that makes it
collection	difficult to obtain good logbook coverage, trans-shipments/landings as well as
	size frequency data. However, information on landings in foreign ports is
	received. Lack of bycatch statistics from non-EU fleet.
Assessment	Lack of assessment of the sustainability of non-target species (e.g. dolphinfish,
	wahoo, barracuda, rainbow runners)
Management	Effort regulation of DFADs. There is a very large number of DFADs in the Indian
	Ocean and with FAD free tuna campaign in market countries; this may affect trade
	of tuna from the Indian Ocean. Understand the social and economic
	consequences under scenarios including a reduction in the number of FADs.

Management	There is a need to improve compliance with Conservation and Management
	Measures (CMM)
MCS	 a) Regionally coordinated observer programme is required b) Promote regional cooperation to combat IUU c) Control at sea largely restricted to national fleet d) Lack of manpower and equipment for surveillance

Table 8.3 FarFish Potential improvements

Southwest	Southwest Atlantic	
Data	Due to the limitations of information on catch statistics from non-Eu nations, this issue is	
collection	still under consideration.	
Management	Internal communication with FarFish partners will ensure that the FarFish contribution	
S	(models and/or tools) will be relevant and add value management of the high seas fisheries	
	in the area.	
Monitoring	Contribute to better monitoring in the area by supporting enforcement by utilizing latest	
0	available satellite systems and tools	
Southeast	·	
Data	Improve quality of logbook data and its submission	
collection	Exploring the feasibility for a self-sampling programme	
Assessment	Analyse current stock assessment methods	
	Improvements using new or existing tools is dependent on the defined CS objectives and	
	OT, making sure that the FarFish contribution is relevant also by consulting SEAFO (FarFish	
	RG)	
Monitoring	Contribute to better monitoring in the area by supporting the enforcement by utilizing	
	latest available satellite systems and tools	
Cape Verde		
Data	The case study is enclosed in ICCAT (FarFish RG), which is responsible for stock assessment	
collection	of tuna and tuna like species and has a number of tools. As ICCAT is a part of FarFish RG,	
	internal communication with FarFish partners will ensure that FarFish contributes in a	
	relevant matter eg. Visualisation	
Management	Contribute to the application of RBM principles and the RFMS framework to Cape Verde	
	tuna fishery	
Monitoring	Contribute to better monitoring in the area by supporting the enforcement by utilizing	
	latest available satellite systems and tools	
Capacity	Improve capacity building by development, implementation of biological sampling and	
building	data collection programmes	
Senegal		
Data	Contribute to improved stock assessment by data collection and analysis	
collection		
Assessment	Improve stock assessment models and tools, developing networks, working groups and	
	knowledge transfer. FarFish aim to add value to present work in CECAF (FarFish RG)	
	applying new models and tools.	

Monitoring	Contribute to better monitoring in the area by supporting the enforcement by utilizing latest available satellite systems and tools
	Tatest available satellite systems and tools
Mauritania	
Assessment,	Advanced knowledge on how the signal of oceanographic processes affects the shrimps
Early warning	stocks and the shrimp fishery will improve assessment and dampen the fluctuations in
of risks	landings. Given the present capacity of the scientific community to foresee the impact of
	large-scale climatic oscillations, this might help to rise early warnings and preventive
	measures to protect the stock and improve long-term profitability of the EU fleet targeting
	shrimp
Seychelles	
Assessment	Contribute to the assessment of non-target species included in recent discard ban (IOTC,
	17/04)
Compliance,	a) Increase compliance by observer training and port state inspections
monitoring	 b) Contribute to better monitoring in the area by supporting enforcement by utilizing latest available satellite systems and tools
Management,	The case study is enclosed in IOTC (FarFish RG), which is responsible for stock assessment
tools, model	of tuna and tuna like species in the Indian Ocean and has a number of tools. IOTC ad hoc
scenarios	working group on FADs is addressing number of FADs. As IOTC is a part of FarFish RG, the
	communication will ensure that FarFish contributes in a relevant matter eg. Visualisation,
l	model scenarios. The dialogue is in progress
