

EcoAfrik Platform. Biodiversity and Marine Ecosystems

PROPOSAL AND QUOTE FOR ECOAFRIK'S SCIENTIFIC ADVICE TO THE LDAC

This annex sets out two specific actions to be undertaken, which were included in the proposal for scientific and technical advice to the LDAC in the consultations to which the Advisory Council is required to respond, particularly in relation to its commitments to the EU.

The proposed actions are as follows:

- 1) Preparation of a technical report compiling indicators on the status of the main fishery resources in West African fishing grounds, in particular small pelagics and demersal species on the continental shelf and in deep waters, based on the best available scientific knowledge.

This information will support the preparation of the opinions to be issued by the Council in relation to Sustainable Fisheries Partnership Agreements with Third Countries (SFPA Agreements), as part of its role in advising the European Union and Member States within the framework of Working Group 4.

- 2) To prepare a science section for the LDAC e-newsletter by publishing short articles that explain basic concepts and specific topics relating to marine biodiversity and ecosystems in African waters, with the aim of highlighting existing scientific knowledge and/or knowledge being acquired in the region.

BUDGET

1) Preparation of a technical report.

Literature searches and archiving, review of scientific and technical documents, production of graphic material, selection of photographs, editing of the report (in Spanish and English).	€5,500
--	--------

2) Editing of a scientific article for the e-newsletter.

Writing of texts, selection of original photographs (in Spanish and English).	€500
---	------

TOTAL QUOTE	€6,000
--------------------	---------------
